1275 Highbury Ave, #16A  
London, On N5Y 1A8

Dear Dr. Rondeau and team:

Sophia Goodin - Age 8

Since her normal dental check-up back in June 2004 we have been on what we refer to as the "fast track" to better breathing and better overall health for Sophia.

Your team of experts knew exactly what Sophia presented from our first consultation visit, diagnosed with narrow upper arch, mouth breathing, jaw misalignment, large tonsils and adenoids.

You connected all the dots for us, symptoms that we had gotten used to over the years including her mouth breathing, early thumb sucking, snoring, occasional apnea, fatigue and numerous tonsillitis and strep throat infections. Our family doctor's guide to how many infections she needed to endure in a year kept changing. We couldn't motivate them enough to take action. We knew as parents this was one piece of the puzzle that needed to be completed sooner than later.

We find it ironic and wonderful that a trip to your office has been the launching point for Sophia's tonsils & adenoid surgery all done quickly and early in the summer so Sophia can recover and get use to her mouth appliance well before school.

08/11/2004

Seeing is believing. Sophia is a different girl these days. Energetic, breathing normally through her nose, even at night time, she is so quiet... Quiet as a mouse!

Thank you for making such a positive change in Sophia's life. Our trust and faith are in good hands.

Sincerely,

Gina & Lee & Sophia Goodin
