INTRODUCTION TO TM DYSFUNCTION

- | | | | |
|----|--|---|---|
| 1. | Flat Plane maxillary splints move the condyle down and forward to the proper position. | T | F |
| 2. | Ideal position for the condyle is up and back in the glenoid fossa. | T | F |
| 3. | Stage 2 internal derangement has no clicking and no pain. | T | F |
| 4. | Prior to any restorative, prosthetic or orthodontic treatment clinicians should treat the clicking jaw and try to recapture the anteriorly displaced disc. | T | F |
| 5. | Patients who present with either an acute or chronic closed lock should be referred to a dentist with special training in treating TMD patients. | T | F |
