**BEST CASE FINISHING TIPS**

- |    |   |   |   |
|----|---|---|---|
| 1. | The best wires for wire bends are NiTi (Nickel-Titanium) wires.   | T | F |
| 2. | Precise root positioning is a critical goal during the case finishing stage of orthodontic treatment.       | T | F |
| 3. | Interproximal reduction (IPR) may be used during finishing to improve tooth alignment or contact tightness. | T | F |
| 4. | Case finishing is primarily about removing brackets and delivering retainers.                               | T | F |
| 5. | Achieving ideal overbite and overjet relationships is a key component of case finishing.                    | T | F |
